Skills

Languages: Java, JavaScript, SQL, Python
Backend: Spring Boot, Spring MVC, Node.js, REST APIs, Basic understanding of J2EE (Servlets, MVC)
Frontend: React
Databases: Docker , PostgreSQL

Work Experience

Blokminers

Associate Software Developer — October 2023 - September 2025

- Engineered scalable backend systems and Web3 applications such as NFT marketplaces, crypto analytics dashboards, and AI-powered language tools.
- Optimized REST API performance for batch processing, reducing latency by **40%** and improving data throughput.
- Implemented secure HTTPS endpoints with JWT-based authentication and AES-256 encryption.
- Containerized backend services using **Docker** and configured **Nginx** load balancing to handle high-traffic workloads.
- Integrated WebSockets to deliver real-time notifications for cryptocurrency price updates.
- Designed and enforced Role-Based Access Control (RBAC) using Spring Security to strengthen API security.
- **Tech:** Java, Spring Boot, Spring MVC, Hibernate, PostgreSQL, Docker, Nginx

Graduate Software Analyst — Capgemini (Client: UOB Bank)

Software Tester — September 2025 - December 2025

- Automated customer information updates (email, mobile number, name, address) on UOB's AS400 bankingsystem using Tosca.
- Worked with the Customer Information File (CIF), which is the unique number that links all of a customer'saccounts and loans under one profle.
- Ensured all updates were correct and refected properly across the banking system.
- Prepared reports and worked with the team to fx issues found during testing.

Education

PSB Academy With Coventry University

Bachelor of Science with First Honours in Computing Science — October 2023

Projects

Real-Time Accident Alert & Priority Routing System

React, Spring Boot, PostgreSQL

- Designed and implemented a real-time incident alert system to ingest accident reports and deliver updates instantly to connected clients
- Built severity-based priority routing logic (High / Medium / Low) to ensure critical incidents are processed and surfaced first
- Developed REST APIs and real-time event streaming using Spring Boot and WebSockets
- Implemented a lightweight React frontend to visualize live incident data with severity-based views
